AVENUE CAR PARK ROAD, BOURNEMOUTH

AVENUE ROAD CAR PARK, BOURNEMOUTH

The Avenue Road multi storey car park in Bournemouth was refurbished by APCOA. As part of the design team we developed lighting improvements as well as a full spectrum colour changing lighting system for the facade of the car park.

The scheme has two elements: an array of colour changing dots installed in the main structural ribs supporting the curved mesh wall, and an internal colour changing LED lighting system, with a wide variety of programmed scenes.

Key facts and information

We designed the system as an element of a competitive tender for the lighting design work. The advantages of the scheme are that the LED light fittings are low energy light fittings and that they require low maintenance. Running costs for the scheme are approximately 1/10th of the anticipated cost of a traditional lighting scheme and with LED lighting frequent lamp changes are not required.
