BLACKBURN TOWN HALL

BLACKBURN TOWN HALL

This scheme was developed to assist in Blackburn with Darwen Borough Council's aim of physically and economically regenerating the town centre. The lighting concept was developed by Form Associates and implemented by Urban Projects on their behalf.

The lighting compliments new street works and public art throughout the town centre and is part of a wider initiative to improve the appearance and appeal of the town centre.

Key facts and information

The building lighting highlights individual aspects of the facade and draws attention to key details through the use of subtly blending colours and colour temperatures.

The system is fully automated and customisable, generating new visual interest in the illuminated facade and marking individual events such as Christmas and Diwali.
